Technical Skills

Testing & QA:

Test Planning, Test Strategy, Test Case Design, Functional Testing, Regression Testing, Exploratory Testing, API Testing, Usability Testing, Defect Lifecycle Management, Root Cause Analysis, Requirements Validation, Risk-Based Testing

Test Automation:

Playwright, Cypress, Selenium, Karate, API Automation, Test Automation Architecture, Test Framework Design, Data-Driven Testing, Test Reporting, Quality Metrics

Performance & Security Testing:

K6, Trivy, Performance Test Fundamentals, Security Scanning, Release Validation

Programming:

Go, JavaScript, TypeScript, Java, Python, C#, C++
React, HTML, CSS

DevOps & Release Engineering:

Git, GitHub, CI/CD Concepts, Docker, Nginx, Linux, Build Pipelines, Release Engineering, Quality Gates, Release Automation

Experience

Test Analyst (Intern)

Alula Technologies — Pretoria (Hybrid)

May 2025 – Present

- Executed manual test cases and identified critical defects
- Validated requirements with stakeholders and developers
- Analyzed results and reported issues, including database and usability

Web Developer (Contract)

C. Steinweg Bridge Ltd — Johannesburg (On-site)

Aug 2024 – Nov 2024

- Built and deployed a marketing website for a cargo tracking platform (React, Docker, Nginx)
- Integrated real-time tracking using Leaflet

Software Tester

Johannesburg

Mar 2024 – Sep 2024

- Designed test cases and executed functional testing
- Reported defects with clear reproduction steps

About Me

Software Development Engineer in Test (SDET) with hands-on experience in software quality engineering, enterprise testing, and full-stack development. Passionate about test automation, CI/CD, and release engineering, and currently building BrikByteOS, an open-source Release Confidence platform, while pursuing a BSc in Computer Science.

Flagship Project

BrikByteOS — Release CLI Platform

- Designed and building a Go-based CLI tool to unify testing, security, and quality signals into a single release decision system
- Implements deterministic execution and normalized result schemas for consistent outputs across environments
- Introduces policy-based quality gates to enforce “safe-to-ship” decisions
- Generates audit-ready evidence bundles for traceability and compliance
- Focused on solving enterprise challenges of fragmented QA tools and unreliable release signals

Github: <https://github.com/BrikByte-Studios/bb-cli-releases>

CaloriSee (AI-Powered Nutrition App)

- Built a full-stack application to log meals, retrieve nutritional data, and recognize food via AI
- Integrated image recognition features for food identification
- Focused on user experience and real-time feedback for dietary tracking

Github: <https://github.com/thapelomagqazana/food-snap>

Education Background

Bachelor of Science in Computer Science & Mathematics (In Progress)

University of South Africa

2026 – Present

NQF 5: Systems Development

WeThinkCode

2022 – 2024

Bachelor of Science in Construction Studies

University of the Witwatersrand

2017 – 2021
